

<b>Project Title:</b>	<b>Annual Small Diameter / AC Replacement</b>
<b>Description:</b>	This program provides for the installation of new waterlines to replace substandard lines, replacement of small (2” to 4”) lines, and old lines in conjunction with other projects. This list of project locations will be reviewed each year to assure priorities are correct.
<b>Location:</b>	This program is city wide. Specific lines and locations are determined yearly based on identified issues and other projects.

### Project Status:

**Project Narrative:**

Many segments of the City's water system consist of old lines that no longer adequately serve customers. Dead end and undersized lines provide inadequate fire flow, insufficient pressure and low water quality. Often these lines require frequent repairs that consumes a high level of maintenance resources. In addition, damage or failure of these lines can result in damage to roadways or other infrastructure. This yearly program will look to update substandard portions of the water system to lower maintenance costs, improve system reliability and safety and lower the possibilities of damage to other infrastructure due to failure.

<b>Project Title:</b>	<b>West Kelso - Cowlitz Way Connection</b>
<b>Description:</b>	Install approximately 1500 LF of new 12" watermain from Cowlitz Way Bridge to Church Street.
<b>Location:</b>	Cowlitz Way Bridge – North 1 <sup>st</sup> Avenue to Church Street.

**Project Narrative:**

The existing water line crosses the Cowlitz River on the Cowlitz Way Bridge and continues under the BNSF Railroad tracks. The connection provides a critical system redundancy. This connection has failed.

This project will replace the existing failed connection under the BNSF Railroad tracks with a line connecting on the Cowlitz Way Bridge removing it from the BNSF Right of Way.

<b>Project Title:</b>	<b>4<sup>th</sup> Avenue – Allen to Oak</b>
<b>Description:</b>	Replace the existing 12-inch cast iron main with approximately 300 linear feet of new 12-inch main.
<b>Location:</b>	S. 4 <sup>th</sup> Avenue between Allen Street and Oak Street

**Project Narrative:**

The existing 12-inch diameter water main was installed in 1924 and has exceeded its service life expectancy. Due to the age of the line it has a high potential for leakage and is susceptible to failure. A failure of a line of this size would result in a great deal of water loss as well as damage to the roadway. The section of S. 4<sup>th</sup> Avenue that this water main runs under is a highly traveled, multi-lane section and emergency disruption would cause extensive traffic disruptions. The project will replace the existing aged water main.

<b>Project Title:</b>	<b>Church St. Water line Replacement, N. Pacific to S. 3rd</b>
<b>Description:</b>	Replace two existing substandard size galvanized water lines with a new main.
<b>Location:</b>	Church St., N. Pacific Av. to S. 3 <sup>rd</sup> Av.

**Project Narrative:**

Two small water lines, a ¾-inch galvanized line and a 1-inch galvanized line, provide service to the properties along Church from N. Pacific to S. 3<sup>rd</sup> Av. Both these lines are over 70 years old, and are substandard in size. This project would replace these two lines with a new watermain.

<b>Project Title:</b>	<b>Davis Terrace Water Meter Replacement</b>

<b>Total Cost :</b>	\$ 200,000	\$ 1,200,000	\$ -	\$ -	\$ -	\$ -	\$ 1,400,000

**Project Narrative:**

This project will update the transmission line to the new Paxton Road Reservoir. The existing water main is constructed of an undesirable and potentially unreliable material. Replacing this line will reduce unaccounted loss of water within the distribution system, eliminate a potential point of failure within the system while improving system reliability and eliminating potential maintenance issues. The upgrade of the water main is included in the Water System Plan.

<b>Project Title:</b>	<b>Treatment Plant VFD Replacement</b>
<b>Description:</b>	Install variable frequency drive motor controls at water treatment plant
<b>Location:</b>	Water Treatment Plant on S. Pacific

**Project Narrative:**

Much of the City's sewer collection system is constructed of concrete or clay pipe and aged more than 50 years. The annual allocation is used to address declining system condition while allowing flexibility to respond to potential urgent needs. The replacement of aged or damaged portions of the system will increase overall condition and reliability. Aged pipes and substandard materials have a higher risk of potential damage or failure and require more frequent maintenance and repair increasing the costs for the City.

<b>Project Title:</b>	<b>Underground Tank Removal/Emergency Power</b>					
<b>Description:</b>	Several City sanitary sewer lift stations have emergency generators served by underground storage tanks. The tanks do not comply with current regulations, and the generators are old. This project will replace the substandard tanks and old generators.					
<b>Location:</b>	Citywide project covering three (3) sanitary sewer lift stations. Catlin Pump Station, Maple Street Pump Station, and Grade Street Pump Station.

Other							\$ -
<b>Total Cost :</b>	\$ 75,000	\$ 600,000	\$ -	\$ -	\$ -	\$ -	\$ 675,000

**Project Narrative:**

The City is mandated to replace the substandard underground fuel storage tanks identified at the pump stations shown in the graphic above. The replacement of these tanks is identified in the sewer upgrade program. Replacement is required to meet State and Federal requirements and the City could face penalties for noncompliance. These fuel storage tanks provide for emergency power for the pump stations. Also, old generators will be replaced, because repair parts are no longer available.

<b>Project Title:</b>	<b>Donation Pump Station</b>
<b>Description:</b>	This project provides for significant upgrades to the facility including new structure, upgrades electrical system, flow metering, controls, additional pumping capacity, and new emergency generation.
<b>Location:</b>	Donation and Burcham

Project Location  
Donation Street  
Pump Station Upgrade

**Project Narrative:**

Asphalt surfaces have a limited useful life due to environmental factors and use. Continued deterioration of roadway surfaces increase the potential for accidents or vehicle damage claims. In order to extend the life cycle of the pavement section a program of repairs and surface treatments is needed. The costs of a repair and maintenance program is significantly less than complete roadway reconstruction.

The yearly fund will construct pavement repairs, overlays, chip seals and other maintenance efforts to extend the useful life of existing roads. The project will use existing roadway condition survey information as well as information collected from City Operations, other staff, and citizen concerns to identify repair locations.

<b>Project Title:</b>	<b>Sidewalk Improvement Program</b>

Asphalt surfaces have a limited useful life due to environmental factors and use. Continued deterioration of roadway surfaces increase the potential for accident or vehicle damage claims. In order to extend the life cycle of the pavement section a program of repairs and surface treatments is needed. The costs of a repair and maintenance program is significantly less than a complete roadway reconstruction.

A number of streets within the City qualify for funding provided under CHAP (Community Hardship Assistance Program). Funds provided through this program can be applied to resurfacing projects that limit the costs of these projects to the City. The project will be limited to the streets that qualify for CHAP funds but will use existing roadway condition survey information as well as information collected from City Operations, other staff, and citizen concerns to identify repair locations.

**Project Narrative:**

The existing at-grade crossings of the BNSF Railroad in south Kelso have safety issues and restrict development of the properties west of these tracks. The construction of an above-grade crossing would increase safety by limiting the use of or allowing the closing of the existing at-grade crossing points. The access would also increase the development potential for the properties lying west of the BNSF Railroad tracks.

This project provides for the planning and design as well as the management and inspection work necessary to construct the above-ground crossing.

<b>Project Title:</b>	<b>South Kelso Railroad Crossing – Right of Way Acquisition and Construction</b>
<b>Description:</b>	Right of Way acquisition and construction of an above-grade crossing of the BNSF Railroad tracks to improve access and safety for properties lying between the BNSF Railroad tracks and the Cowlitz River.
<b>Location:</b>	Hazel Street – From South Pacific Avenue to South River Road.

**Project Narrative:**

Talley Way is the main link to the industrial area and experiences the heaviest truck traffic in town. It is vital to maintain this roadway in order to adequately serve existing businesses and to attract new industries to the City. Due to traffic volumes, and roadway widening is needed for the truck traffic and for turning movements. Curb and gutter exist in only a few locations, and road access varies from site to site as the property owners have seen fit. The existing bridge crossing Coweeman River is too narrow for the current levels of traffic, is in deteriorating condition and needs to be replaced.

Widening of the roadway and imposing access controls will help traffic flow and safety through this vital corridor. The installation of curb & gutter as well as other storm drainage features will also increase the attractiveness of the area to potential businesses.

**Project Narrative:**

The portion of Oak Street identified for revitalization runs between the City Hall / Downtown area of Kelso and 4<sup>th</sup> Av, south of Allen Street. The aging facility is a primary access to the Downtown area. Updates to this area could encourage private investment.

Multiple overlay and chip seal projects have been constructed on this section of road. These projects have extended the lifespan of the surface but have resulted in a road cross section that does not meet current specifications for cross section and slope. The curb, gutter and sidewalk are worn or damaged in multiple locations and are in need of replacement. The street lights along this road segment are old and do not meet current standards and should also be replaced.

<b>Project Title:</b>	<b>Streetlight Upgrades and Enhancements</b>
<b>Description:</b>	Project will upgrade existing streetlights to LED and provide installation of streetlights in unserved and underserved areas citywide.
<b>Location:</b>	To be determined

**Project Narrative:**

Due to the costs associated with installing, maintaining and operating street lights, numerous areas within the City are unserved or underserved by streetlights. The installation of street lighting improves pedestrian and motorist safety and encourages business and leisure activity. Technological advancements have lowered the costs associated with operating street lighting which makes the installation of new lights feasible.

Install new lighting and upgrade existing lighting. The location of the lighting will be determined during the first phase of project analysis.

**Project Narrative:**

The existing storm drain pipe on N. Pacific between Church St. and Allen St., and at Oak and 4<sup>th</sup>, is old and substandard in size. Also, while there are storm drains serving the Cowlitz Way intersection, there is no storm drain system serving N. Pacific between Cowlitz Way and Academy. This project will replace the old pipe and install additional new pipe to provide a complete storm drain system that meets current City standards between Church St. and Allen St.

<b>Project Title:</b>	<b>Bloyd Street Storm Drain Replacement</b>

<b>Total Cost :</b>	\$ 1,000,000	\$ -	\$ -	\$ -	\$ -	\$ -	\$ 1,000,000

**Project Narrative:**

Parking at Tam O'Shanter Park is insufficient for many of the events held at the Park and some of the parking areas are poorly maintained gravel. Overflow parking happens along road shoulders, grass or landscape areas or in local business parking lots. Also, some of the access roads in the Park are narrow and gravel, making vehicle circulation in the Park difficult and compromising emergency vehicle access.

The project will address the deficient parking, access and surfacing issues. Safety and circulation will be improved for vehicle and pedestrian traffic within the park. Parking areas will be added with pedestrian access between the parking and the Park amenities. Also, pavement markings, directional signing, and additional lighting will be installed to improve traffic flow, parking efficiency and safety.

The first phase of construction was completed in 2019, and the second phase in 2020. The funding for Phase 3 provides for additional paved parking, paving the remaining unpaved roads, adding additional paved walkways, and installing additional lighting and electrical plug-ins. Construction of Phase 3 is planned for summer 2022.

<b>Project Title:</b>	<b>Lads and Lassies Park Expansion</b>

Project Narrative:

The Southwest Washington Regional Airport (SWRA) has the only jet capable runway in southwest Washington. Protection of this vital asset is of the most importance. This fuel tank repair project is vital to keeping SWRA fully operational by ensuring fuel availability.

<b>Project Title:</b>	<b>Fuel Farm Improvements</b>
<b>Description:</b>	This project will include removing three underground 12,000-gallon aviation fuel tanks and replacing them with two above ground 12,000-gallon fuel tanks. Project will also include pavement repairs to surrounding ramp.
<b>Location:</b>	This program is located at the Southwest Washington Regional Airport immediately west of the Fixed Base Operator terminal building

**Project Narrative:**

The Southwest Washington Regional Airport (SWRA) has the only jet capable runway in southwest Washington. Protection of this vital asset is of the most importance. This fuel tank and ramp/apron project is vital to keeping SWRA competitive with surrounding airports and to retain and attract new business now and into the future.

<b>Project Title:</b>	<b>Obstruction Removal Phase 1 - 2023</b>		
<b>Description:</b>	This project is the planning stage (phase 1) for survey and engineering for the removal of Part 77 obstructions and grading within the runway environment. The projects identified in this project will be funded at the direction and approval of the FAA.		
<b>Location:</b>	This program is located on, and around, the Southwest Washington Regional Airport.

**Project Narrative:**

The Southwest Washington Regional Airport (SWRA) has identified several future projects through the most recent Airport Master Plan Update Project. Phase I of the Obstruction Removal project will be a planning project on how to move the airport forward based on the projects approved by the FAA for funding and implementation over the next five-year period.

<b>Project Title:</b>	<b>Obstruction Removal Phase 2 - 2024</b>	
<b>Description:</b>	This project is the construction stage or phase 2 of the overall Obstruction Removal project for implementing the projects identified in Phase I. This project will be directed by the FAA, Master plan update project, and based on available funding.	
<b>Location:</b>	This program is located on, and around, the Southwest Washington Regional Airport per future identified FAA approved projects.

**Project Narrative:**

Runway 12/30 is in critical need of reconstruction as the pavement is beyond its planned useful life and has been identified to be in poor condition. A 2019 FAA funded maintenance project was completed to ensure the runway would remain usable until the FAA was in a position to fund the larger reconstruction project. The reconstruction project will replace the runway to full depth and include replacement of all runway lighting and approach navigation lighting to include the PAPI system. Project is dependent on FAA and State funding at time project is scheduled to begin.

During this fiscal year, improvements to airport security will take place including additional and improved perimeter fencing, automated vehicle gates, and closed circuit security system.

<b>Project Title:</b>	<b>Runway Reconstruction and Navigational Lighting Construction 2026</b>
