

South Kelso

Coal Creek
Road
Corridor

Legend

- Water Bodies
- City Boundary - Longview
- City Boundary - Kelso
- 2010 Urbanized Area Boundary
- Geologic Hazard Area

Note: Geological hazard areas are defined as landslides (deep-seated and shallow) and areas between the scarp lines and deep-seated landslides, and potentially unstable slopes.

This map was prepared using data derived from the WA DNR's 2006 Digital Landslide Inventory for the Cowlitz County Urban Corridor, Washington. The various landslide layers were combined in order to create one geological hazard GIS layer. The depicted geological hazard areas are buffered by 50 feet.
